2 Implementation Summary

External testing availability via the Web Tools CAT / stg- environment for each release can be found in the respective section below. The external test environment can be accessed, using your production USERID, via the following URL scheme, host and path:

- Secure APIs: https://stg-secure.shippingapis.com/ShippingApi.dll

If you receive an authorization error, please contact webtools@usps.gov and include your USERID.

Note: Gray coloring indicates production release changes have been implemented.

2.1 Production Release: January 11, 2024

External testing: Dec.18

The API changes noted below will be released to production in the late-night hours of January 11, 2024. USPS is enacting a Price Change on January 21, 2024, which will be available on January 11 when using a ship date of January 21 or beyond. All domestic and international price calculator and shipping label APIs will reflect updated pricing in XML responses, on shipping label images, and in the Shipping Services Files (see Appendix A for full list of price calculator and label APIs). For information on specific prices being updated, please go to https://about.usps.com/newsroom/national-releases/2023/1006-usps-proposes-new-prices-for-2024.htm. To test updated prices, use a ship date of 1/21/24 or later in our lower testing environments.

Changes beyond basic price updates are explained below, per API.

2.1.1 Elimination of Parcel Select Lightweight (PSLW) & Updates to Parcel Select Destination Entry (PSDE)

1. Summary: USPS will eliminate Parcel Select Lightweight (PSLW) and update the Parcel Select Destination Entry (PSDE) price tables with new ounce-based prices at 4-ounce, 8-ounce, and 12-ounce increments. Impacted Web Tools APIs will be updated to support these changes as detailed below. Web Tools will support backwards compatibility such that integrators may continue to pass existing API inputs for PSLW which will return PSDE outputs.

2. Impacted APIs:
   - Domestic Price Calculator API (API=RateV4)
   - eVS Domestic Label API (API=eVS)
   - Service Delivery Calculator API (API=SDCGetLocations)

3. Domestic Price Calculator (API=RateV4) Updates:
   - Service (i.e., <Service>) enumeration "PARCEL SELECT LW" will be accepted but return updated Parcel Select Destination Entry (PSDE) pricing and availability in the XML response.
   - Service (i.e., <Service>) enumeration "PARCEL SELECT DE" will return updated PSDE pricing and availability in the XML response.
   - The RateV4 API will support new published weight increments for PSDE.
   - Current PSDE service standards and published Nonstandard Fees will apply to new weight increments.

4. eVS Domestic Label API (API=eVS) Updates:
   - Service (i.e., <ServiceType>) enumeration "PARCEL SELECT LW" will be accepted but return updated Parcel Select Destination Entry (PSDE) pricing/availability and label image in XML response.
   - Service (i.e., <ServiceType>) enumeration "PARCEL SELECT DE" will return updated PSDE pricing/availability and label image in XML response.
   - The eVS API will support new published weight increments for PSDE.
   - Current PSDE service standards and published Nonstandard Fees will apply to new weight increments.
The eVS API will be updated to support applicable PSDE Service Type Codes (STCs) per USPS Publication 199 (Pub 199) specifications.

Web Tools will make updates to the Shipping Partner Event File and Shipping Services File for PSDE labels generated through the eVS Label API to ensure Pub 199 compliance.

Service Delivery Calculator API (API=SDCGetLocations) Updates:

- The SDCGetLocations API will be updated to support Parcel Select Destination Entry (PSDE) service standards and commitments.
  - `<MailClass>` value of “7” will indicate PSDE commitments.
  - `<MailClass>` value of “9007” will indicate PSDE HAZMAT commitments.

2.1.2 eVS Domestic Label API – USPS HAZMAT Updates

1. Summary: Web Tools will make updates to the eVS Domestic Label API (API=eVS) API to enforce the type of Hazardous Materials (HAZMAT) is provided in the request via the `<ExtraService>` enumeration to generate a HAZMAT label.
   - When `<ContentType>="HAZMAT"` is provided without HAZMAT extra services (i.e., `<ExtraService>` enumerations 810-832), Web Tools will return a new error "Additional HAZMAT details required, HAZMAT extra service required."

2.1.3 Web Tools API Access Updates – Extended to March 1, 2024

1. Summary: Effective January 31, 2024, Web Tools will require the password be provided with the USERID in each label API XML request. Otherwise, an error will return. In TBD 2024, the password will be required for all API requests. Integrators are strongly encouraged to provide this information in advance of the change to avoid any service disruptions or integration issues. Contact webtools@usps.gov for any questions or concerns.

2. Summary: Effective TBD December 2023, API access and permissions will be added separately after registration. To obtain these permissions, contact webtools@usps.gov and provide in your request for access:
   - Username/UserID (from the automated registration email):
   - USPS Mailer ID (MID):
   - Company Website:
   - Are you a shipper or software provider? Please provide details on how your business will use the APIs.
   - List of API(s) to which you would like access and expected volume (peak daily, weekly, monthly) – reference www.usps.com/webtools for a complete list of APIs.

2.1.4 Maintenance

1. Fixes to the Shipping Services File process to remove End of Line conversion characters passed in the API before generating the manifest. This fix will impact all Label APIs to resolve issues with line feeds passed in the API request that are included in the Shipping Services File resulting in errors.

2. Fixes to eVS Domestic Label API (API=eVS) to resolve a defect when `<ServiceType>="Priority Mail Express"` and `<ImageParameters>="BARCODE ONLY"` are passed in the request resulting in a label image returning incorrectly.

3. Fixes to Domestic Price Calculator API (API=RateV4) API to improve error message returned when invalid value is provided in `<DropOffTime>` tag.
   - Current error message “An unexpected system error has occurred. Please try again later or contact the System Administrator” will be updated to “DropOffTime is invalid.”

4. Fixes to all Domestic Label APIs to resolve formatting issues when the destination addresses is a Commercial Mail Receiving Agency (CMRA). Reference https://pe.usps.com/text/pub28/28c2_040.htm.
   - Updates will resolve issues where the secondary address element of the mailing address for the CMRA (i.e., STE) and the CMRA customer’s private mailbox number (PMB) were incorrectly combined.

5. Fixes to eVS Domestic Label API (API=eVS) to resolve a defect resulting in “HAZMAT - Surface Transportation Only” endorsement not printing for Ground Advantage HAZMAT labels.
2.2 Production Release: February 22, 2024

External testing: Feb. 9

2.2.1 Domestic Price Calculator API – Expected Delivery Updates

1. Summary: Web Tools will update the Domestic Price Calculator API (API=RateV4) API to return expected delivery information for all mail classes. Expected delivery information is currently returned for Priority Mail Express (PME) and Priority Mail (PM) mail classes when available; this will expand to all mail class variants with this release.

   o When the <ShipDate> or <Content> or <SpecialServices> tags are provided in the request, expected delivery information returns in the <CommitmentDate> and <CommitmentName> tags for PME and PM mail classes. Remaining mail classes (i.e., Ground Advantage, Media Mail, Library Mail, PSDE, BPM, etc.) will return expected delivery information in the <CommitmentDate> and <CommitmentName> tags.

      • Example of current XML response with retail pricing for non-PME/PM mail class (i.e., Ground Advantage):

        
        <Postage CLASSID="1058">
        <MailService>USPS Ground Advantage</MailService>
        <Rate>X.XX</Rate>
        </Postage>

      • Example of new XML response with retail pricing for non-PME/PM mail class (i.e., Ground Advantage):

        
        <Postage CLASSID="1058">
        <MailService>USPS Ground Advantage</MailService>
        <Rate>X.XX</Rate>
        <CommitmentDate>YYYY-MM-DD</CommitmentDate>
        <CommitmentName>X-Day</CommitmentName>
        </Postage>

      • Reference Appendix B for sample XML request and response.

   o When <ShipDate Option="HFP"> is included in the request, expected delivery information returns in the <CommitmentDate>, <CommitmentName>, and <CommitmentTime> tags for PME and PM mail classes. Remaining mail classes (i.e., non-PME/PM) will return expected delivery information in the <CommitmentDate> and <CommitmentName> tags; <CommitmentTime> will not return.

      • Example of current XML response with retail pricing for non-PME/PM mail class (i.e., Ground Advantage):

        
        <Postage CLASSID="1058">
        <MailService>USPS Ground Advantage</MailService>
        <Rate>X.XX</Rate>
        </Postage>

      • Example of new XML response with retail pricing for non-PME/PM mail class (i.e., Ground Advantage):

        
        <Postage CLASSID="1058">
        <MailService>USPS Ground Advantage</MailService>
        <Rate>X.XX</Rate>
        <Commitment>
        <CommitmentDate>YYYY-MM-DD</CommitmentDate>
        <CommitmentName>X-Day</CommitmentName>
        </Commitment>
        </Postage>
2.2.2  Web Tools API Access Updates

1. Summary: Effective March 1, 2024, Web Tools will require the password be provided with the USERID in each label API XML request. Otherwise, an error will return. In TBD 2024, the password will be required for all API requests. Integrators are strongly encouraged to provide this information in advance of the change to avoid any service disruptions or integration issues. Contact webtools@usps.gov for any questions or concerns.

2.2.3  eVS Domestic Label API - USPS Smart Locker Updates (API=eVS)

1. Summary: Updates to the eVS Domestic Label API (API=eVS) to manifest Smart Locker labels every 15 minutes.
   o When eVS Smart Locker labels are successfully created, Web Tools will schedule the record to manifest within the next 15 minutes.
   o eVS Smart Locker labels with future ship dates will manifest on label creation date but preserve the future ship date in the SSF H1 pos. 4 (Date of Mailing) field.
   o If an eVS integrator is not generating a Smart Locker label, the manifest frequency will not change.

2. Summary: Updates to the eVS Domestic Label API (API=eVS) to allow for multiple package dimension configurations when validating if a package will fit into the USPS Smart Locker.
   o The API will determine backend if a package fits into a Smart Locker using the package dimension values passed in the <Width>, <Length>, and <Height> request fields. New API logic will be as follows:
     • Package dimension values passed in the eVS Label request <Width>, <Length>, and <Height> fields will be ordered from greatest to least per package standards where Length>Width>Height.
     • Maximum locker dimension values returned from the GetLockerInfo API <LockerSizeMaximumLength>, <LockerSizeMaximumWidth>, and <LockerSizeMaximumHeight> fields will be ordered from greatest to least per package standards where Length>Width>Height.
     • eVS Label package dimension values will be validated against maximum locker dimensions and an error will return if package dimensions exceed locker dimensions.

2.2.4  Maintenance

1. Effective Jan. 17, 2024, updates to impacted APIs to support change in delivery street address line of a smart locker from "PO BOX LOCKER" to "USPS SMART LOCKER."
   o Impacted APIs: eVS Domestic Label API (API=eVS), Address API (API=Verify), and Parcel Locker Lookup API (API=GetLockerInfo).

2. Effective Jan. 17, 2024, updates to eVS Domestic Label API (API=eVS) to change Smart Locker labels service banner text from "USPS PO BOX LOCKER PICKUP" to "DELIVER TO USPS SMART LOCKER."
   o Reference Appendix B for sample label.

3. Effective Jan. 17, 2024, fixes to eVS Domestic Label API (API=eVS) to resolve bug in creation of Shipping Service File (v2.0) for Smart Locker labels resulting in below fields not populating correctly:
   o D1 pos 78 (Delivery Address) field
   o D2 pos 3 (Secondary Delivery Address) field
   o D2 pos 5 (State) field

4. Effective Feb. 2, 2024, fixes to Domestic Price Calculator API (API=RateV4) and eVS Domestic Label API (API=eVS) to resolve a defect with oversize pricing not returning correctly for Parcel Select Destination Entry.

5. Effective Feb. 2, 2024, fixes to resolve defect with Ground Advantage dimensional weight pricing not returning correctly.
   o Impacted APIs: Domestic Price Calculator API (API=RateV4), USPS Returns Label API (API=USPSReturnsLabel), and eVS Domestic Label API (API=eVS).
6. Effective Feb. 2, 2024, fixes to Domestic Price Calculator API (API=RateV4) to resolve defect where $0.00 price was returning for Priority Mail Hold For Pickup.

7. Effective Feb. 2, 2024, fixes to Domestic Price Calculator API (API=RateV4) to resolve defect where successful responses were returning for invalid content types (<ContentType>) for Smart Lockers (i.e., Cremated Remains, Perishable, Pharmaceuticals, Medical Supplies and Lives). As a result of the fix, Smart Lockers will not return as an option when above content types are indicated.

8. Effective Feb. 2, 2024, fixes to Domestic Price Calculator API (API=RateV4) to resolve defect where Smart Lockers were returning incorrectly as eligible for APO/FPO/DPO+PTFAS locations requiring a domestic customs form. As a result of the fix, Smart Lockers will not return as an option when shipping to locations requiring a domestic customs form.

9. Effective Feb. 2, 2024, fixes to Domestic Price Calculator API (API=RateV4) to resolve defect where incorrect price was returned for Bound Printed Matter Commercial Parcels Carrier Route (i.e., when <Service>="BPM" and <Sortation>="CR").

10. Effective Feb. 2, 2024, fixes to resolve a defect in the zone and price returned when Ground Advantage (<1lb) and Priority Mail military zone exceptions apply (i.e., military ZIPs 090-099, 962-966). Example origin ZIP 06461 to destination ZIP 09011, the Zone is 2, except for Priority Mail service where the Zone is 5, and USPS Ground Advantage (< 16 oz.) where the Zone is 5. Fix will return Zone 5 instead of incorrect Zone 2 in this scenario.
   o Impacted APIs: Domestic Price Calculator API (API=RateV4) and eVS Domestic Label API (API=eVS).

11. Effective Feb. 2, 2024, fixes to Domestic Price Calculator API (API=RateV4) to resolve defect where Parcel Select Destination Entry HAZMAT options were not returned when eligible. Fix will return HAZMAT options when <Service>="ALL" or “ONLINE” and <DestinationEntryFacilityType> are provided in the XML request.

12. Effective Feb. 6, 2024, fixes to resolve API errors returned when an origin accept location was not available for a Priority Mail Express or Priority Mail commitment. The fix will enable a successful response to return with the Priority Mail Express (<MailClass>="1") and/or Priority Mail (<MailClass>="2") commitments (<Commitment>) without an accept location (<Location>) if one does not exist.
   o Impacted APIs: Service Delivery Calculator (API=SDCGetLocations) and Express Mail Service Standards API (API=ExpressMailCommitments).

13. Effective Feb. 6, 2024, fixes to Service Delivery Calculator (API=SDCGetLocations) API to resolve errors returned when a 9-digit origin ZIP code (i.e., <OriginZIP>="441423628") was included in the request.

14. Fixes to resolve defect with trademark symbol “™” not printing correctly on customs form description of contents field for ZPL label images.
   o Impacted APIs: eVS PMEI and PMI International Label APIs (APIs=eVSPriorityMailIntl and eVSFirstClassMailIntl).

15. Fixes to resolve defect with Parcel Select Destination Entry dimensional weight not returning correctly for rectangular and nonrectangular packages.
   o Impacted APIs: Domestic Price Calculator API (API=RateV4) and eVS Domestic Label API (API=eVS).

16. Fixes to resolve defect on customs form to increase font size where description of contents field was printed too small/unreadable.
   o Impacted APIs: eVS PMI and FCPIS International Label APIs (APIs=eVSPriorityMailIntl and eVSFirstClassMailIntl).

17. Effective Feb. 24, fixes to Package Tracking API (API=TrackV2) API to resolve errors seen with Package Track API requests (i.e., “TrackRequest”).

2.3 Production Release: March 28, 2024
External testing: Mar. 19

2.3.1 Web Tools API Access Updates

1. Summary: Effective March 28, 2024, Web Tools will require the password be provided with the USERID in each label API XML request. Otherwise, an error will return. Integrators are strongly encouraged to provide this information in advance of the change to avoid any service disruptions or integration issues. Contact webtools@usps.gov for any questions or concerns.
2.3.2 International Shipping Regulatory Mandate – Enforcement Updates

1. Summary: International shipping regulatory mandates will require shipments to European Union (EU) countries to contain a valid Harmonization Code and Content/Item description designed to increase accountability and efficiency and decrease the risk of fraud and security threats. By complying with this new mandate, customers will:
   - Avoid fines and penalties associated with noncompliance.
   - Reduce safety and security risks.
   - Help ensure timely and efficient delivery to the EU.
   - Prevent customs delays and/or return of non-compliant mail items.

Per the EU, vague item descriptions on customs forms such as “gifts,” “clothing,” “electronics,” and even “none” will no longer be considered an acceptable description. To learn more about providing acceptable item descriptions, view the chart below or read the EU’s guidance on acceptable terms at Guidance on Acceptable and Unacceptable Terms for the Description of Goods. Note: Harmonization Code (i.e., HS Tariff Number) must be based on the Harmonized Commodity Description and Coding System developed by the World Customs Organization.

Effective March 28, 2024, Web Tools APIs will be updated to implement additional changes to support these new shipping regulations. Countries requiring additional export compliance data (i.e., valid Harmonization Code and Content/Item description) currently indicated by <HSCodeReqd> tag will begin enforcing this requirement. Enforcement status of a location will be indicated by a new <HSCodeEnforced> response tag available within the Domestic and International Price Calculator APIs. Changes will be optional and backwards compatible. Response tags <HSCodeReqd> and <HSCodeEnforced> (new) will only return if <ReturnHSCodeReqd>="Y" is included in the request. This value will dictate when new Label API errors return if required export compliance data is not provided when generating a shipping label. All locations will be designated with the below indicators:
   - Not Mandatory (i.e., extra export compliance data not required):
     - <HSCodeReqd>=false
     - <HSCodeEnforced>=false
   - Mandatory (i.e., extra export compliance data required, but not enforced) – new API errors will not return for shipping labels.
     - <HSCodeReqd>=true
     - <HSCodeEnforced>=false
   - Mandatory (i.e., extra export compliance data required, enforced) – new API errors will return for shipping labels.
     - <HSCodeReqd>=true
     - <HSCodeEnforced>=true

2. International Price Calculator API (API=IntlRateV2) Updates:
   - Updates to allow integrators the option to return which countries will enforce extra export compliance data.
     - When <ReturnHSCodeReqd>="Y" is included in the request, a new <HSCodeEnforced> response tag with values "false"/"true" will return in the response to indicate if the export compliance data requirement is being enforced.
     - An <HSCodeEnforced> value of “true” will indicate a country is enforcing new shipping regulations. As a result, Harmonization Code (i.e., <HSTariffNumber>) and Content description (i.e., <Description>) will be required when generating a shipping label or new API errors will return.
     - Reference Appendix B for sample XML request and response.

3. Domestic Price Calculator API (API=RateV4) Updates:
   - Updates to allow integrators the option to return which APO/FPO/DPO+PTFAS destinations will enforce valid Harmonization Code and Content/Item description because of new international shipping regulatory mandates.
     - When <ReturnHSCodeReqd>="Y" is included in the request, a new <HSCodeEnforced> response tag with values "false"/"true" will return in the response to indicate if the export compliance data requirement is being enforced.
• An <HSCodeEnforced> value of “True” will indicate a country is enforcing new shipping regulations. As a result, Harmonization Code (i.e., <HSTariffNumber>) and Content description (i.e., <Description>) will be required when generating a shipping label or new API errors will return.
• Possessions, Territories, and Freely Associated States (PTFAS) locations are not impacted by new shipping regulations. These locations will return the following indicators:
  ➢ <HSCodeReqd>="False" and <HSCodeEnforced>="False."
• APO/FPO/DPO locations where military state is "AE" (Armed Forces Europe, the Middle East, and Canada) will remain unchanged. These locations are impacted by the new shipping regulations (i.e., export data is required for shipping) but will not yet be enforced in Label APIs. These locations will return the following indicators:
  ➢ <HSCodeReqd>="True" and <HSCodeEnforced>="False."
• APO/FPO/DPO locations where military state is "AP" (Armed Forces Pacific) and "AA" (Armed Forces Americas except Canada) are not impacted by new shipping regulations (i.e. new optional indicator will be negative.) These locations will return the following indicators:
  ➢ <HSCodeReqd>="False" and <HSCodeEnforced>="False."
• Reference Appendix B for sample XML request and response.

4. Domestic and International Label API Updates:
   o Impacted International Label APIs:
     • eVS PMEI International Label API (API=eVSExpressMailIntl)
     • eVS PMI International Label API (API=eVPriorityMailIntl)
     • eVS FCPIIS International Label API (API=eVSFirstClassMailIntl)
   o Impacted Domestic Label APIs:
     • eVS Domestic Label API (API=eVS)
   o For enforced countries/destinations (i.e., <HSCodeEnforced>="True"), Web Tools will require <HSTariffNumber> in the in XML request. This populates the “HS Tariff Number” field on the customs form and SSFv2.0 D4 #4 Customs Category Article field required to satisfy new International regulatory mandates.
     • HS Tariff Number must be based on the Harmonized Commodity Description and Coding System developed by the World Customs Organization.
     • Web Tools will not validate the <HSTariffNumber> if provided in the correct format.
     • Web Tools will attempt to obtain a valid <HSTariffNumber> using the required <Description> and optional <ItemCategory> and <ItemSubCategory> values provided in the XML request if the <HSTariffNumber> is required but not provided or format is incorrect.
       ➢ If successful, Web Tools will use the valid <HSTariffNumber> on the customs form and in the SSF. The <Description> provided by integrator in XML request will remain unchanged.
       ➢ If unsuccessful, Web Tools will return a new error “HS Tariff Number cannot be determined based on inputs provided” if the <HSTariffNumber> is invalid and Web Tools’ attempt to obtain a valid value on behalf of the integrator is unsuccessful.
     o For enforced countries/destinations (i.e., <HSCodeEnforced>="True"), the required Item Detail <Description> field will be validated against a case-insensitive blacklist of descriptions not permitted. This list will include: none, not applicable, n/a, null, gift, and merchandise. This field populates the “Detailed Description of Contents” field on customs form and SSFv2.0 D4 #5 Customs Description field required to satisfy new International regulatory mandates.
     • Web Tools will return a new error "Invalid description for destination country" if provided <Description> value is on blacklist.
   o NOTE: Legacy Customs Forms APIs (APIs=CustomsCN22V2, CustomsCP73V2) will be retired (schedule TBD) and excluded from the above updates to satisfy regulatory mandates. Integrators using these APIs must provide valid HS Tariff Numbers and Item Descriptions for EU destinations or risk non-delivery.
2.3.3 External Post Office Locator API Updates (API=POLocatorV2Ext)

1. Summary: Updates to External Post Office Locator API (API=POLocatorV2Ext) to return when a facility supports Connect Local or Connect Regional.
   - New request service filter enumeration `<Service>="CONNECTLOCAL"` will be added to enable users to search for locations that support Connect Local.
   - New service response value `<Service name="CONNECTLOCAL"/>` will return when a facility supports Connect Local.
   - New request service filter enumeration `<Service>="CONNECTREGIONAL"` will be added to enable users to search for locations that support Connect Regional.
   - New service response value `<Service name="CONNECTREGIONAL"/>` will return when a facility supports Connect Regional.
   - Reference Appendix B for sample XML requests and responses.

2.3.4 Original Tracking Number Option – Label API Updates

1. Summary: Updates to Domestic Label APIs to allow integrators to pass Original Tracking Number information to be included in the Shipping Services File (SSF).
   - Impacted APIs:
     - eVS Domestic Label API (API=eVS)
     - USPS Returns Label API (API=USPSReturnsLabel)
   - New optional `<OriginalTrackingNumber>` tag will be added to collect the original tracking number (i.e., IMpb) over labeled on the package.
     - Value must be numeric and correspond to defined IMpb barcode lengths per USPS PUB199.
     - Tag will support either shortened PIC barcode length (i.e., 92055XXXXXXXXXXXXXXXXX) or full routing barcode (i.e., 420220392055XXXXXXXXXXXXXXXX).
   - New optional `<OriginalTrackingNumberConstruct>` tag will be added to collect the construct of the original tracking number collected.
     - Value must be valid 3-character IMpb barcode construct defined in USPS PUB199. For example, “C01.”
   - When `<OriginalTrackingNumber>` is populated, the `<OriginalTrackingNumberConstruct>` will be required. If not provided, an error will return "OriginalTrackingNumberConstruct required when OriginalTrackingNumber provided."
   - If `<OriginalTrackingNumberConstruct>` is populated without `<OriginalTrackingNumber>`, the value will be ignored.
   - When `<OriginalTrackingNumber>` and `<OriginalTrackingNumberConstruct>` are provided in the request, the Shipping Services File (SSFv2.0) will be populated as follows:
     - D1 pos 73 (Tracking Indicator) field will be populated with a value of "01" (Original Tracking Number indicated).
     - D1 pos 74 (Original Label Tracking Number Barcode Construct) field will be populated with the value passed in `<OriginalTrackingNumberConstruct>` field.
     - D1 pos 75 (Original Barcode Number) field will be populated with the value passed in `<OriginalTrackingNumber>` field.
   - The current label and receipt images, XML response, and Shipping Partner Event File (SPE) will not be impacted.
   - Reference Appendix B for sample XML requests.

2.3.5 Priority Mail Express (PME) Label and Receipt Updates

1. Summary: Web Tools will update the service banner for Priority Mail Express labels. The Priority Mail Express receipt layout will also be updated.
   - Impacted APIs:
     - eVS Domestic Label API (API=eVS)
   - Web Tools will update the label service banner and receipts to remove "X-DAY" commitment for all domestic PME labels.
• For example: “PRIORITY MAIL EXPRESS 1-DAY®” will become “PRIORITY MAIL EXPRESS®”
  o PME domestic customs forms and PMEI labels will not be impacted.
  o The API request and response will not be impacted.
  o The PME domestic receipt layout will be updated to reflect layouts returned for all other mail classes.
  o Reference Appendix B for sample labels and receipts.

2.3.6 eVS International Label API Updates
1. Summary: Web Tools will update the eVS FCPIS International Label API (API=eVSFirstClassMailIntl) with new fields to allow integrators to populate data in the Shipping Services File (SSF) not used when generating the shipping label. For example, new fields will be added to pass IOSS data for FCPIS shipments in the SSF for export compliance.
  o Impacted API: eVS FCPIS International Label API (API=eVSFirstClassMailIntl)
  o New optional <ImportersReferenceNumber> field will be added to collect IOSS data. Values will be alphanumeric and truncated at 40 characters when used in the Shipping Services File.
  o New optional <ImportersReferenceType> field will be added with values: "TAXCODE", "VAT", and "IMPORTERCODE." This field will be required when <ImportersReferenceNumber> is populated.
  o When <ImportersReferenceNumber> is populated and <ImportersReferenceType> is blank an error will return: "ImportersReferenceType required when ImportersReferenceNumber is supplied."
  o When <ImportersReferenceNumber> is blank and <ImportersReferenceType> is populated, the value will be ignored, and a successful response will return.
  o When the <ImportersReferenceNumber> and <ImportersReferenceType> fields are passed in the request, the Shipping Services File will be populated as follows:
    • <ImportersReferenceNumber> will populate SSFv2.0 G1 pos 26 "Importers Reference" field.
    • <ImportersReferenceType> will populate SSFv2.0 G1 pos 25 "Importers Reference Type" field with values TAXCODE: "1", VAT: "2", and IMPORTERCODE: "3."
  o New optional request tag <FromCustomsReference> will be added to populate the SSFv2.0 G1 pos 54 "Sender Customs Reference Number" field.
  o Label images and XML response will not change.
  o Reference Appendix B for sample XML request and response.

2.3.7 Maintenance
1. Updates to the USPS Returns Label API (API=USPSReturnsLabel) to remove Ship Date information printed on the Priority Mail Express Return Service receipts. Reference Appendix B for sample receipt.
2. Updates to eVS Domestic Label API (API=eVS) image processing to resolve intermittent label image distortion issues reported by a customer.
3. Updates to eVS Domestic Label API (API=eVS) to remove insurance extra service code ("931") from Shipping Services File when STCs 659 (Priority Mail: Adult Signature Required Return Receipt) and 660 (Priority Mail: Adult Signature Restricted Delivery Return Receipt) are used per PUB199 compliance.
4. Updates to eVS Domestic Label API (API=eVS) to resolve errors returned for Ground Advantage when destination is PTFAS (ex. Palau).
5. Updates to eVS Domestic API (API=eVS) to resolve errors returned for Ground Advantage when weight is over one pound and destination is PTFAS (ex. Micronesia).
2.4 Production Release: April 25, 2024

External testing: Apr. 11

2.4.1 USPS Web Tools Registration Updates

1. Summary: Web Tools will update the registration email content to reflect the new registration process. For any questions contact webtools@usps.gov.

2.4.2 Maintenance

1. Effective Apr. 2, 2024, updates to the eVS Domestic Label API (API=eVS) to allow <ToPhone> request tag to accept international phone numbers.
2. Fixes to eVS PMEI and PMI International Label APIs (APIs=eVSExpressMailIntl, eVSPriorityMailIntl) to resolve bug resulting in longer Exporter’s Reference field value bleeding over field dimensions on the label image.
3. Fixes to eVS Domestic Label API (API=eVS) to resolve a bug that occurs when <ImageParameter> value is “4X6LABELP PAGE” and <ReceiptOption> value is “NONE” resulting in a 4X6 label format when a full-page format is expected.
4. Fixes to eVS Domestic Label API (API=eVS) to remove insurance extra service code (“931”) from Shipping Services File when STCs 930 (Ground Advantage >1lb Adult Signature Return Receipt) and 933 (Ground Advantage >1lb Adult Signature Restricted Delivery Return Receipt) are used per PUB199 compliance.
5. Fixes to eVS Domestic Label API (API=eVS) to resolve a bug populating the Shipping Services File (SSF) D1 pos. 68 PO Box Indicator field. Fix will populate this field in the SSF with “Y” when destination address is a validated P.O. Box address. If the destination address is not cleansed (i.e., integrator elects to bypass validation or it cannot be validated), the <POBox> value will then be used to populate the SSF.
6. Additional updates to eVS Domestic Label API (API=eVS) image processing to resolve intermittent label image distortion issues reported by a customer.

2.5 Production Release: May 30, 2024

External testing: May 21

2.5.1 Web Tools Maintenance Outage Impacting All Label APIs – Effective May 23, 9pm ET

1. Summary: A planned maintenance outage impacting all Web Tools Label APIs (reference Appendix sections 3.1.3-4) will occur Thursday May 23, 2024, at 9pm ET for approximately 3-5 minutes as a result of server memory upgrades. During this time, integrators will see errors return for label APIs and potential degraded performance for other APIs.

2.5.2 eVS Domestic Label API – Export Compliance Updates (API=eVS)

1. Summary: Web Tools will make updates to generate an International Customs (G1) record in the Shipping Services File (SSF) for documents less than 16 ounces destined to applicable APO/FPO/DPO+PTFAS locations. These labels remain excluded from requiring customs forms, but Web Tools will provide additional export compliance data in the SSF G1 record needed for shipping.
   - Impacted API: eVS Domestic Label API (API=eVS)
   - Criteria for documents <16oz. export compliance updates:
     - <CustomsContentType> value of “DOCUMENTS”,
     - <WeightInOunces> value is less than “16” oz.,
     - APO/FPO/DPO+PTFAS destination where a domestic integrated customs form is typically required but documents <16oz. is an exception.
   - For above criteria, Web Tools will create an International Customs Record (G1) record in the Shipping Services File (SSF) in addition to the current Header record (H1), Detail record 1 (D1), and Detail Record 2 (D2) records.
API validation will not change to remain backwards compatible, however, integrators should populate the below fields which will be leveraged to populate the G1 record in the SSF:

- `<FromName>` (At least 2 characters first name and 2 characters last name)
- `<FromFirm>` (At least 2 characters)
- `<FromPhone>`
- `<RecipientName>` (At least 2 characters first name and 2 characters last name)
- `<ToName>` (At least 2 characters first name and 2 characters last name)
- `<ToFirm>` (At least 2 characters)
- `<NetPounds>` and `<NetOunces>`
- Item `<Value>`
- `<CustomsContentType>`
- `<CustomsComments>`
- `<ToContactEMail>`
- `<ToPhone>`
- `<AESITN>`
- `<ExportersReference>`
- `<ImportersReferenceType>`
- `<ImportersReference>`
- `<ImportersContact>`
- `<RestrictionType>`
- `<RestrictionComments>`
- `<LicenseNumber>`
- `<CertificateNumber>`
- `<InvoiceNumber>`

- The label image (i.e., domestic label) will remain unchanged.
- The label API inputs, validation, and outputs will remain unchanged.

### 2.5.3 Maintenance

1. **Fixes to eVS Domestic Label API (API=eVS) to resolve gaps with USPS Electronic Signature Online (eSOL) previously known as Electronic Signature On File (eSOF). Reference [https://faq.usps.com/s/article/USPS-Electronic-Signature-Online](https://faq.usps.com/s/article/USPS-Electronic-Signature-Online) for details.**

   - Updates will allow integrators to populate the `<eSOFAllowed>` request tag within the `<ExpressMailOptions>` group for mail classes other than Priority Mail Express when eSOL is available.
     
     - Integrators should populate `<eSOFAllowed>` with "True" to request an Electronic Signature Online (eSOL) is used when applicable.
     - Integrators should populate `<eSOFAllowed>` with "False" to request the use of eSOL be overridden such that a physical or "wet" signature is required.
     
     - If the criteria to override eSOL are not met when `<eSOFAllowed>="False"` is indicated an error "Electronic Signature override requires Signature Confirmation or Insurance greater than $500" will return.

2. Updates to Domestic Label APIs to extend the `<FromPhone>` value limit to 30 characters.

3. **Fixes to eVS Domestic Label API (API=eVS) to resolve bug in Shipping Services File G1 pos. 31 Net Weight (Pounds) field resulting in the incorrect value being used.**

4. **Fixes to eVS Domestic Label API (API=eVS) to resolve a bug that resulted in `<SenderPhone>` not populating the Shipping Services File (SSF) G1 pos. 14 Sender Phone field when `<ePostageMailerReporting>=1"` was provided in the request.**

5. **Fixes to eVS Domestic Label API (API=eVS) to resolve a bug that resulted in `<RestrictionType>` and `<RestrictionComments>` values passed in the request not populating the SSF G1 pos. 37 Package Restrictions and pos. 38 Package Restriction Comments fields.**

6. **Updates to eVS Domestic Label API (API=eVS) to populate SSF G1 pos. 13 Sender Delivery Point Code when origin address is AMS-standardized and validated and destination requires a domestic integrated customs form.**
7. Fixes to eVS Domestic Label API (API=eVS) to resolve bug with <ImportersContact> field not populating the SSF G1 pos. 27 Importers Telephone Number when a phone number value was passed. Updates will result in <ImportersContact> field populating the SSF G1 pos. 27 Importers Telephone Number for phone numbers or SSF G1 pos. 27 Importers E-mail Address for email addresses passed in the request.
8. Fixes to eVS Domestic Label API (API=eVS) to remove a default value of “1” (Airmail Priority) in the SSF G1 pos. 34 Delivery Type field.
9. Fixes to eVS Domestic Label API (API=eVS) to resolve a defect with <NonDeliveryOption> and <AltReturnAddress> request fields not populating the SSF G1 record when a domestic integrated customs form was required. Updates will reflect the below logic:
   o <NonDeliveryOption> → G1 pos 42 Senders Instructions in case of non-delivery “3” (Redirect Address)
   o <AltReturnAddress1> → G1 pos 46 Redirect Name
   o <AltReturnAddress2> → G1 pos 49 Redirect Address
   o <AltReturnAddress3> → G1 pos 50 Redirect City
   o <AltReturnAddress4> → G1 pos 51 Redirect State
   o <AltReturnAddress5> → G1 pos 51 Redirect ZIP5
   o <AltReturnAddress6> → G1 pos 51 Redirect ZIP4
10. Fixes to eVS Domestic Label API (API=eVS) to resolve bug where SSF G1 pos. 58 Recipient State, pos. 59 Recipient ZIP Code, and pos. 60 Recipient ZIP+4 fields were not populated when destination address fields (i.e., <ToState>, <ToZip5>, and <ToZip4>) were provided in the request and a domestic integrated customs form was required.
11. Backend fixes to eVS Domestic Label API (API=eVS) to resolve bug in address validation for street addresses associated with a Group E P.O. Box.
12. Fixes to SCAN API to watermark labels generated in a test environment.

2.6 Production Release: June 27, 2024
   External testing: June 17

2.6.1 Web Tools Maintenance Outage Impacting all APIs - June 20, 2024, 9pm ET
   1. Summary: A planned maintenance outage impacting all Web Tools APIs will occur on June 20, 2024, at 9PM ET for approximately 15 minutes. During this time, integrators could see errors return for all APIs and/or potential degraded API performance as DBs are rebooted.

<table>

Table 1: Maintenance Outage Details effective June 20th, 2024

2.6.2 Shipping Partner Event File Updates
   1. Summary: Web Tools will update the impacted label APIs to expand support for generating a Shipping Services File (SPEF) on behalf of an integrator.
      o Impacted API:
         • eVS Domestic Label API (API=eVS)
      o Web Tools will update the eVS Domestic Label API (API=eVS) to support generating a Shipping Partner Event File (SPEF V5.0) with an Event Code of “GX” for Parcel Select Destination Entry labels. (i.e., when <ServiceType>=“PARCEL SELECT DE” and <OptOutOfSPE>=“false”)
2.6.3 Customs Forms Dangerous Goods Updates

1. Summary: Web Tools will update impacted Domestic and International Label APIs to remove support for Dangerous Goods as a content option for Customs Forms.
   - Impacted International Label APIs:
     - eVS PMEI International Label API (API=eVSExpressMailIntl)
     - eVS PMI International Label API (API=eVSPriorityMailIntl)
     - eVS FCPIS International Label API (API=eVSFirstClassMailIntl)
   - Impacted Domestic Label API:
     - eVS Domestic Label API (API=eVS)

2. eVS International Label API Updates:
   - Web Tools will remove "DANGEROUSGOODS" as a valid content type `<ContentType>` enumeration.
     - Error "Invalid Content Type" will return if provided in the XML request.
   - Web Tools will not print "DANGEROUS GOODS" on customs form Category of Items field listed on PS Forms: 2976, 2976-A, and 2976-B.
   - Web Tools will no longer use "8" (Dangerous Goods) to populate the Shipping Services File (SSFv2.0) G1 pos. 35 Description of Package field.

3. eVS Domestic Label API Updates:
   - Web Tools will remove "DANGEROUSGOODS" as a valid customs content type `<CustomsContentType>` enumeration.
     - Error "Invalid Customs Content Type" will return if provided in the XML request when a customs form is required.
     - These changes will not impact scenarios when a domestic label is returned. If the `<CustomsContentType>` is provided it will be ignored.
   - Web Tools will not print "DANGEROUS GOODS" on customs form Category of Items field listed on PS Forms: 2976, 2976-A, and 2976-B.
   - Web Tools will no longer use "8" (Dangerous Goods) to populate the Shipping Services File (SSFv2.0) G1 pos. 35 Description of Package field.

2.6.4 Domestic and International Label APIs – Pipe Special Character Updates

1. Summary: Web Tools will make updates to all Label APIs to handle a pipe special character ("\|") as a space. Reference Appendix A sections 3.1.3-4 for a complete list of impacted APIs.
   - Integrators are recommended to not include a pipe special character ("\|") in the API request.
   - If a pipe is provided in the API request, Web Tools will treat as a space where applicable in the API XML response, label image, Shipping Partner Event File, and Shipping Services File.

2.6.5 Maintenance

1. Effective May 30, 2024, fixes to the eVS Domestic Label API (API=eVS) to correct a bug resulting in the total weight of the package not being validated as greater than the weight of the items in the package when a customs form was required.
   - Gross package weight (<WeightInOunces>) must exceed the net weight of items in the package (i.e., Item totals for <NetPounds> and <NetOunces>).
   - Fix will restore this validation and return an error message “Total Net Weight cannot exceed Total Gross Weight of package” if weights provided in the request are invalid.

2. Fixes to eVS Domestic and International Label APIs manifesting process to improve processing and resolve issues with records not being manifested or delayed.
   - Impacted APIs:
     - eVS Domestic Label API (API=eVS)
     - eVS Domestic Cancel API (API=eVSCancel)
     - eVS PMEI International Label API (API=eVSExpressMailIntl)
     - eVS PMI International Label API (API=eVSPriorityMailIntl)
     - eVS FCPIS International Label API (API=eVSFirstClassMailIntl)
     - eVS International Cancel API (API=eVSICancel)
     - SCAN
Integrators will not be allowed to update eVS records scheduled for the nightly 12:30AM CT manifest process (i.e., ability to cancel or add to a SCAN form) starting at 12:00AM CT.
  - eVSCancel and eVSICancel APIs will return a new error “manifest in-progress” for records scheduled for the nightly manifest process if attempts to cancel occur between 12:00AM-12:29AM CT before manifesting occurs at 12:30AM CT.
  - Web Tools will create separate files for a single MasterMID if volume of records scheduled for the nightly manifest process is too high to resolve issues with processing.

2.7 Production Release: July 9, 2024

External testing: Available

The API changes noted below will be released to production in the late-night hours of July 9. USPS is enacting a Price Change on July 14, 2024, which will be available on July 9 when using a ship date of July 14 or beyond. All domestic and international price calculator and shipping label APIs will reflect updated pricing in XML responses, on shipping label images, and in the Shipping Services Files (see Appendix A for full list of price calculator and label APIs). For information on specific prices being updated, please go to https://about.usps.com/newsroom/national-releases/2024/0409-usps-recommends-new-prices-for-july-2024.htm.

Changes beyond basic price updates are explained below, per API.

2.7.1 USPS Returns Updates

1. Summary: Web Tools APIs will support updates to standardize the naming convention for USPS Returns.
   - Impacted APIs:
     - Domestic Price Calculator API (API=RateV4)
     - USPS Returns Label API (API=USPSReturnsLabel)

2. Domestic Price Calculator API (API=RateV4) Updates:
   - New <Service> enumerations will be added where “S” is removed:
     - "PRIORITY MAIL EXPRESS RETURN"
     - "PRIORITY MAIL RETURN"
     - "GROUND ADVANTAGE RETURN"
   - Current <Service> enumerations with “S” will continue to be supported to maintain backwards compatibility:
     - "PRIORITY MAIL EXPRESS RETURNS"
     - "PRIORITY MAIL RETURNS"
     - "GROUND ADVANTAGE RETURNS"
   - The <MailService> response tag descriptions will be updated to remove "Service" for USPS Returns products. The “CLASSID” values will remain unchanged.
     - For example, CLASSID="962" <MailService> description currently contains “Priority Mail Return Service” which will be updated to “Priority Mail Return.”

Reference below table for updated list of CLASSID <MailService> descriptions which will have “Service” removed.
<table>
<thead>
<tr>

Table 2: RateV4 API Mail Service Description Updates
3. USPS Returns Label API (API=USPSReturnsLabel) Updates:
   - The label image service banner will be updated to remove “SERVICE”:
     - “PRIORITY MAIL EXPRESS RETURN SERVICE” will be “PRIORITY MAIL EXPRESS RETURN”
     - “PRIORITY MAIL RETURN SERVICE” will be “PRIORITY MAIL RETURN”
     - “GROUND ADVANTAGE RETURN SERVICE” will be “GROUND ADVANTAGE RETURN”
   - The receipt images will be updated to remove “Service” language as reflected above.
   - Reference Appendix B for sample label and receipt mocks.

2.8 Production Release: July 25, 2024
   External testing: Jul. 15

2.8.1 Maintenance
   1. Backend updates to eVS Domestic Label API (API=eVS) to reduce error responses due to delivery confirmation tracking email failures.
   2. Fixes to eVS Domestic Label API (API=eVS) to resolve formatting issues when the destination address is a Commercial Mail Receiving Agency (CMRA). Reference https://pe.usps.com/text/pub28/28c2_040.htm.
   - Updates will resolve issues where the secondary address element of the mailing address for the CMRA (i.e., STE) and the CMRA customer’s private mailbox number (PMB) were incorrectly combined.
   3. Backend updates to eVS Domestic Label API (API=eVS) to resolve errors returning when <ePostageMailerReporting>=“1” and <SenderCity> and <SenderState> values were lower case.
   4. Fixes to resolve defect with trademark symbol “™” not printing correctly impacting all Label APIs (reference Appendix A sections 3.1.3-4).
   5. Fixes to International Label APIs to correct overflow on “Exporter’s reference”, “AES/ITN/Exemption”, and “Invoice/License/Certificate No(s)” fields on the customs form.
      - Impacted APIs:
        - eVS PMEI International Label API (API=eVSExpressMailIntl)
        - eVS PMI International Label API (API=eVSPriorityMailIntl)
        - eVS FCPIS International Label API (API=eVSFirstClassMailIntl)

2.9 Production Release: August 2024
   External testing: TBD
   Items will be moved to this release when scheduled and included in future versions of the release notes.

2.10 Production Release: September 2024
   External testing: TBD
   Items will be moved to this release when scheduled and included in future versions of the release notes.

2.11 Production Release: October 2024
   External testing: TBD
   Items will be moved to this release when scheduled and included in future versions of the release notes.

2.12 Production Release: November 2024
   External testing: TBD
   Items will be moved to this release when scheduled and included in future versions of the release notes.
2.13 Production Release: To Be Determined

Items will be moved to this release when scheduled and included in future versions of the release notes.

2.14 Announcements

2.14.1 New USPS APIs Platform

1. Summary: New USPS APIs are available in the USPS Developer Portal which offer more API customization, product offerings, and payment options. Additional features include increased security via OAuth 2.0 authentication. Visit the USPS Developer Portal for details.
   - Web Tools External Label API integrators migrating to the new USPS API platform should contact webtools@usps.gov for support.
   - To provide feedback, complete the: Migration Feedback Form.

3.2 Appendix B – Sample API Requests, Responses, and Labels

3.2.1 Sample XML Requests

This section provides sample XML requests to the test/staging environment that demonstrate some of the changes implemented to our APIs in this release. These requests are provided as a reference to aid in your understanding of the changes and in your integration with our updated APIs. You should still complete your typical testing and verification processes to ensure that your system is communicating properly with the most updated versions of the Web Tools APIs.

Please note that you must place your valid USERID and Password into the request. Sample responses are provided below the sample requests to illustrate the changes that will occur to the XML schema. Please note that the data within the tags may differ depending on inputs provided. Areas of note are highlighted.

### Domestic Price Calculator API Sample Request

Feb. 22, 2024 Release reference 2.2.1: Expected Delivery Information returned for all mail classes when `<ShipDate>` is included in the request.

Release Notes

International Price Calculator API Sample Response

Mar. 28, 2024 Release reference 2.3.2: Option to return International Shipping Mandate enforcement status

<IntlRateV2Response>
<Package ID="1">
<Observations>
1. A parcel may be addressed to a street address or to a post office box. A local telephone number for the addressee should be provided when the item is addressed to a street address and must be provided when the item is addressed to a post office box.
2. For Priority Mail International parcels, an invoice, in duplicate, is required for all commercial shipments regardless of value and all personal shipments valued at $300 or more. The invoices must be affixed to the outside of the parcel or may be enclosed in PS Form 2976-E with the customs declaration. The names of the counties in Ireland are as follows: Carlow, Cavan, Clare, Cork, Donegal, Dublin, Galway, Kerry, Kildare, Kilkenny, Leitrim, Laois, Limerick, Longford, Louth, Mayo, Meath, Monaghan, Offaly, Roscommon, Sligo, Tipperary, Waterford, Westmeath, Wexford, and Wicklow. 4. The names of the county and the delivery office must form a part of the address of all mail articles. 5. In the case of articles liable to customs duty that are exported by air, the name of the origin country must be enclosed. Not to exceed 10 characters. 6. The declaration must be clearly marked "Imported under license," and unless the relative license is produced at the time of customs examination. In such cases the license should be produced before the goods are imported. 7. As of July 1, 2021, the value-added tax (VAT) exemption is abolished on all imported goods. For more information regarding the European Union's VAT rules, visit https://ec.europa.eu/taxation_customs/business/vat/vat-e-commerce_en. 8. A harmonized code (i.e., a code for the Integrated Tariff of the European Communities, also known as a "TARIC code") is required for all goods destined to Ireland. The Irish customs authority has a tiered classification system. Some items require a 10-digit TARIC code while other items may be described using the 8-digit or 6-digit TARIC code. 9. The invoice, in duplicate, is required for all commercial shipments regardless of value and all personal shipments valued at $300 or more. The invoices must be affixed to the outside of the parcel or may be enclosed in PS Form 2976-E with the customs declaration. 10. For Priority Mail International parcels, an invoice, in duplicate, is required for all commercial shipments regardless of value and all personal shipments valued at $300 or more. The invoices must be affixed to the outside of the parcel or may be enclosed in PS Form 2976-E with the customs declaration.
</Observations>

<Restrictions>
1. Arms and weapons. Articles bearing false trademarks or lacking the indication of origin required by the Irish regulations. Coins minted in a foreign country, except gold and silver; false or counterfeit coins. Hay, straw, including articles made of straw. Human remains. Live plants and animals. Peat moss litter except under license. Prison-made goods. Safety fuses; fireworks. Tobacco, cigars or cigarettes. Tapered thread; felt hats and caps for women and girls; brushes and mops; wheaten flour and any commodity or product of wheat; rubber proofed wearing apparel; sparkling plugs and component parts; silk and artificial silk hose; and certain woven fabrics.
2. Arms and weapons. Articles bearing false trademarks or lacking the indication of origin required by the Irish regulations. Coins minted in a foreign country, except gold and silver; false or counterfeit coins. Hay, straw, including articles made of straw. Human remains. Live plants and animals. Peat moss litter except under license. Prison-made goods. Safety fuses; fireworks. Tobacco, cigars or cigarettes. Tapered thread; felt hats and caps for women and girls; brushes and mops; wheaten flour and any commodity or product of wheat; rubber proofed wearing apparel; sparkling plugs and component parts; silk and artificial silk hose; and certain woven fabrics.
3. Merchandise and all articles subject to customs duty. PS Form 2976-E with the customs declaration. Not to exceed 10 characters. The declaration must be clearly marked "Imported under license," and unless the relative license is produced at the time of customs examination. In such cases the license should be produced before the goods are imported. 7. As of July 1, 2021, the value-added tax (VAT) exemption is abolished on all imported goods. For more information regarding the European Union's VAT rules, visit https://ec.europa.eu/taxation_customs/business/vat/vat-e-commerce_en. 8. 3.2.2 Sample Labels/Receipts

This section provides sample label and receipt images to the test/staging environment that demonstrate some of the changes implemented to our APIs in this release. These samples are provided as a reference to aid in your understanding of the changes and in your integration with our updated APIs. You should still complete all your usual testing and verification processes to ensure that your system is communicating properly with the most updated version of Web Tools.

3.2.2.1 Updated eVS Smart Locker Sample Label

![Sample Label Image]

Figure 1: eVS Priority Mail Smart Locker Label
3.2.2.2 Updated eVS Domestic Label API Priority Mail Express Label and Receipt

Figure 2: eVS Priority Mail Express Label & Receipt
3.2.2.3 Updated USPSReturnsLabel API Priority Mail Express Return Receipt

Instructions

1. Please use a laser or laser-quality printer.
2. Adhere shipping label to package with tape or glue. - DO NOT TAPE OVER BARCODE. Be sure all edges are secure. Self-adhesive label is recommended.
3. Place label so that it does not wrap around the edge of the package.
4. Each shipping label number is unique and can be used only once - DO NOT PHOTOCOPY.
5. If a mailing receipt is required, present the article and Online e-Label Record at a Post Office for postmark.

QR Code Instructions

SCAN QR Code to request free Package Pickup or to find a Post Office to drop off packages.
