# 2 Implementation Summary

External testing availability via the Web Tools CAT / stg- environment for each release can be found in the respective section below. The external test environment can be accessed, using your production UserID, via the following URL scheme, host and path:

- Secure APIs: https://stg-secure.shippingapis.com/ShippingApi.dll
- Non-secure APIs: http://stg-production.shippingapis.com/ShippingApi.dll

If you receive an authorization error, please contact webtools@usps.gov and include your UserID.

Note: Gray font indicates changes have been implemented in production.

## 2.1 Production Release: January 21, 2021

External testing: January 4, 2021

The API changes noted below will be released to production in the late-night hours of January 21. USPS is enacting a Price Change on January 24, 2021, which will be available on January 21 when using a ship date of January 24 or beyond. All domestic and international price calculator and shipping label APIs will reflect updated pricing in XML responses, on shipping label images, and in the Shipping Services Files (see Appendix A for full list of price calculator and label APIs). For information on specific prices being updated, please go to https://about.usps.com/newsroom/national-releases/2020/1009-usps-announces-new-prices-for-2021.htm.

Changes beyond basic price updates are explained below, per API.

### 2.1.1 International Price Calculator API - First-Class Package International Service (FCPIS) Size Limit Updates (API=IntlRateV2)

1. Updates to the IntlRateV2 API to allow integrators to indicate their package is a roll so that the appropriate roll dimensions validation per IMM 251.22-23 (reference: [https://pe.usps.com/text/imm/immc2_021.htm](https://pe.usps.com/text/imm/immc2_021.htm)) is used instead of the current non-roll dimension validation.
   - Web Tools will add `<Container>` tag with a new enumeration “ROLL.”
   - When package is a roll, integrators should pass `<Container>=“ROLL”` in XML request to return accurate pricing and availability in XML response with dimensions validated correctly.
   - Reference Appendix B for example

   - Web Tools will validate dimensions provided in XML request. Dimensions that do not meet the new minimum requirements for FCPIS non-roll packages will result in FCPIS not being returned as an available service in the XML response.

### 2.1.2 International eVS Label APIs - First-Class Package International Service (FCPIS) Size Limit Updates

1. Updates to the eVS First-Class Mail International Label API (API=eVSFirstClassMailIntl) to allow integrators to indicate their package is a roll so that the appropriate roll dimensions validation per IMM 251.22-23 (reference: [https://pe.usps.com/text/imm/immc2_021.htm](https://pe.usps.com/text/imm/immc2_021.htm)) is used.
   - New `<Container>` request tag added with enumeration “ROLL”.
   - When package is a roll, integrators should pass `<Container>=“ROLL”` in XML request to return accurate response with dimensions validated correctly.
   - When `<Container>=“ROLL”` indicated in XML request, errors will return if dimensions provided in XML request do not meet IMM 251.22 requirements (reference: [https://pe.usps.com/text/imm/immc2_021.htm](https://pe.usps.com/text/imm/immc2_021.htm)).
   - Reference Appendix B for example
2. Updates to the eVS First-Class Mail International Label API (API= eVSSFirstClassMailIntl) to support new First-Class Package International Service (FCPIS) minimum dimensions of 6 inches length x 4 inches height for non-roll packages. Reference https://about.usps.com/postal-bulletin/2020/pb22562/html/updt_002.htm for details.
   - Web Tools will validate dimensions provided in XML request. Dimensions that do not meet the new minimum requirements for FCPIS non-roll packages will result in an error being returned.

2.1.3 External Post Office Locator API Updates (API=POLocatorV2Ext)
1. Web Tools will no longer return the <LBRORetail> response tag in the External Post Office Locator API (API=POLocatorV2Ext). Label broker printing at retail will instead be indicated by <Service> enumeration “LBRORETAIL” returned for USPS facilities where available.
   - Reference Appendix B for examples

2.1.4 Maintenance
1. eVS (Domestic) Label API (API=eVS) will be updated to resolve longer <FromFirm> values passed in XML request not printing on the label image.
2. eVS (Domestic) Label API (API=eVS) will be updated to resolve inconsistent <FromFirm> and <ToFirm> truncation on the label image. Due to space limitations on label, values for these tags will be truncated to 32 characters.
3. Shipping Partner Event (SPE) file error handling logic will be updated:
   - When SPE manifesting process fails, Web Tools will retry until SPE file transmitted regardless of when the associated Shipping Services File is created.
4. eVS (Domestic) Label API will be updated to resolve overlap defects on label indicia:
   - “USPS Permit No. G-10” run-off will be resolved for eVS G-10 ZPL labels
   - Permit Holder Name run-off will be resolved for eVS domestic labels.

2.2 Production Release: February 26, 2021
   External testing: February 8, 2021

2.2.1 Sunday/Holiday API Updates (API=SundayHolidayAvailability)
1. Web Tools will make updates to grant SundayHolidayAvailability API permissions automatically upon Web Tools registration. This will allow integrators to obtain Sunday and holiday delivery availability for a given origin/destination ZIP Code pair without additional permissions granted by the Web Tools Program Office.
   - Contact webtools@usps.gov for any questions or detailed specifications.

2.2.2 USPS Web Tools Security Certificate Updates – Test Environment (effective 2/2/21)
1. USPS Web Tools will update the below staging/testing and production security certificates (reference table below). Please be sure your servers are compatible with the latest security certificates.
   - Systems that interface with the Web Tools APIs may be impacted by this change and will need to update the certificates used to connect to Web Tools. Please see the complete list of certificates being updated below. Contact your certificate/service provider for issue resolution.
   - Integrators should test their integration using the URLs listed for each security certificate.
   - For a full listing of impacted APIs for each certificate update, refer to Appendix C (sections 3.3.2 and 3.3.4 only)

</tbody>
</table>
2.2.3 Maintenance

1. Integrator vulnerability updates - Web Tools will update all API error responses to protect integrators who may not be adequately protected in the event Web Tools APIs are exploited in a malicious attack.
   - Web Tools will HTML encode XML request inputs that are returned in the error XML response, preventing malicious code from returning from Web Tools to integrators.

2.3 Production Release: March 26, 2021

External testing: March 8, 2021

2.3.1 USPS Web Tools Security Certificate Updates – PROD (effective 3/2/21)

1. USPS Web Tools will update the below production security certificates (reference table below). Please be sure your servers are compatible with the latest security certificates.
   - Systems that interface with the Web Tools APIs may be impacted by this change and will need to update the certificates used to connect to Web Tools. Please see the complete list of certificates being updated below. Contact your certificate/service provider for issue resolution.
   - Integrators should test their integration using the URLs listed for each security certificate.
   - For a full listing of impacted APIs for each certificate update, refer to Appendix C (sections 3.3.2 and 3.3.4 only)

Table 2: USPS Web Tools Security Certificate Schedule

2.3.2 Maintenance

1. Updates to monitor, optimize, and prevent generation of duplicate barcodes for the eVS (Domestic) Label API (API=eVS).

2.4 Production Release: April 22, 2021

External testing: April 12, 2021

2.4.1 Maintenance

1. The eVS Domestic and International Label APIs will be updated to resolve overlap defects on ZPL 203dpi and 300dpi images.
2. The eVS (Domestic) API will be updated to correct an incorrect error message returned for the <ToContactMessaging> tag when <ToContactPreference>="SMS" is provided in the XML request.
3. All domestic label APIs will be updated to correct an issue with address standardization. Reference Appendix A section 3.1.3 for a complete list of APIs.
   - A limited subset of street addresses passed correctly in <Address2> request tag was incorrectly parsed in the response. The API typically splits primary and secondary street address information due to space limitations on the label. The fix will resolve an issue where the primary address was incorrectly split resulting in the incorrect address returned and printed on the label.
2.5 Production Release: May 21, 2021
External testing: May 10, 2021

2.5.1 Priority Mail Express Commitment Updates
1. Web Tools will support updated Priority Mail Express (PME) commitment times.
   o Impacted APIs:
     • RateV4
     • SDCGetLocations
     • ExpressMailCommitment
     • SundayHolidayAvailability
     • eVS
   o There will be no XML request/response structural changes, however integrators are encouraged
to test and verify they receive correct Priority Mail Express (PME) commitment times.
   o Extra service 161 for Priority Mail Express 10:30 AM delivery will no longer be supported.
   o Contact webtools@usps.gov for any questions.

2.5.2 USPS Returns Label API Updates (API=USPSSReturnsLabel)
1. Web Tools will update the USPS Returns Label API (API=USPSSReturnsLabel) to support insurance and
   Shipping Services File creation. Integrators interested in obtaining API access will need to contact the
   USPS Mailing & Shipping Solutions Center (MSSC) at 1-877-672-0007 for initial onboarding before using
   the API.
   o The USPS Returns Label API will support the following configuration options determined during
     initial customer onboarding:
     • Non-manifesting (SSF) Option: Supports creation of returns label to a single delivery
       destination address configured per Web Tools UserID with the option of Signature
       Confirmation extra service. Unique ZIP4 for returns supported. Note: The ability to
       generate returns labels to multiple delivery destinations requires separate Web Tools
       UserIDs for each destination address.
     • Manifesting (SSF) Option (new): Supports creation of returns label to a configured
       delivery destination address with options for Signature Confirmation and Insurance extra
       services. Unique ZIP4 for returns supported. A Shipping Services File will be submitted
       by Web Tools for returns labels on behalf of the integrator.
     • Manifesting (SSF) eFulfillement for Returns Option (new): Supports creation of returns
       label for eFulfillement returns customers to a delivery destination address collected in the
       API request with options for Signature Confirmation and Insurance extra services. A
       Shipping Services File will be submitted by Web Tools for returns labels on behalf of the
       integrator.
   o A summary of features the USPS Returns Label API will support is included in the below table.
   • Note: Eligibility of each API feature will be determined by customer manifesting
     configuration described in above section 2.5.2.1 (i.e., Non-manifesting Option vs.
     Manifesting Options).
   • For detailed USPS Returns Label API specifications contact webtools@usps.gov.

2.5.3 Domestic Price Calculator API Updates – USPS Returns (API=RateV4)
1. Web Tools will update the RateV4 API to support USPS Returns pricing and availability.
   o New <Service> request tag enumerations:
     • "Priority Mail Returns" (Priority Mail Return service)
     • "Priority Mail Cubic Returns" (Priority Mail Cubic Return service) Note: this pricing will not be supported within the USPSReturnsLabel API.
     • "Ground Returns" (Ground Return service)
     • "First Class Returns" (First-Class Package Return service)
   o Contact webtools@usps.gov for any questions.

2.6 Production Release: July 1, 2021
External testing: June 7, 2021

2.6.1 eVS Parcel Select Destination Entry Updates (APIs=eVS, SCAN, RateV4)
1. Summary: Web Tools will make eVS (Domestic) and SCAN API updates as noted below to support Parcel Select Destination Entry (PSDE) and Parcel Select Lightweight (PSLW) label creation.
   o Contact webtools@usps.gov for questions or detailed specifications.
2. eVS API Configuration Updates:
   o New permissions will be added to control use of Parcel Select Destination Entry (i.e., PSDE/PSLW) within the eVS (Domestic) API.
   o New validation added to verify customers with Parcel Select Destination Entry permission are eVS permit only. ePostage permit types will not be supported with Parcel Select Destination Entry.
o New permissions to allow PSLW Machinable - when enabled, the following PSLW scenarios normally not available for machinable packages (i.e. `<Machinable>="True"` weight and dimensions machinable) will be allowed and handled as PSLW Irregular within API response and Shipping Services File:
  • `<ServiceType>="PARCEL SELECT LW", <DestinationEntryFacilityType>="DNDC"`, `<SortationLevel>="SCF"
  • `<ServiceType>="PARCEL SELECT LW", <DestinationEntryFacilityType>="DSCF"`, `<SortationLevel>="SCF"
  • When permissions not granted, the above scenarios will return an error.

3. eVS (Domestic) Label API Updates (API=eVS) - Web Tools will update the eVS Domestic Label API to support PSDE and PSLW label creation for approved eVS commercial integrators.
   o New `<ServiceType>` options “PARCEL SELECT DE” and “PARCEL SELECT LW” will be added.
   • Web Tools will verify when `<ServiceType>` options “PARCEL SELECT DE” or “PARCEL SELECT LW” are included in the eVS API XML request new Parcel Select Destination Entry permissions are granted otherwise an error will be returned.
   • When `<ServiceType>` options “PARCEL SELECT DE” or “PARCEL SELECT LW” are included in the eVS API XML request, the `<POZipCode>` request tag will be required to collect Destination Entry Facility ZIP Code and populate SSFv2.0 H1 pos 7 (Entry Facility ZIP Code) field.
   o eVS Parcel Select Destination Entry (i.e., PDSE and PSLW) will not be supported to APO/FPO/DPO+PTFAS locations requiring a customs form.
     • Web Tools will return an error if APO/FPO/DPO+PTFAS locations requiring a customs form are combined with `<ServiceType>` options “PARCEL SELECT DE” and “PARCEL SELECT LW” in the eVS XML request.
   o New request tags to support PSDE/PSLW will be added to eVS API:
     • Destination Entry Facility `<DestinationEntryFacilityType>`
       ➢ Values: “DNDC”, “DSCF”, “DDU”, and “NONE” (Origin Entry).
       ➢ When “DNDC” or “DSCF”, at least one Container ID (i.e., `<ContainerID1>`) and Container Type (i.e., `<SortContainerType1>`) tag will be required otherwise an error will be returned.
       ➢ Will populate SSFv2.0 H1 pos 6 (Entry Facility Type), H1 pos 12 (Containerization Indicator), D1 pos 8 (Destination Facility Type), and Destination Rate Indicator (D1 pos 38) fields.
     • Sortation `<SortationLevel>`
       ➢ Used to populate SSFv2.0 H1 pos 12 (Containerization Indicator).
     • Container ID(s) `<ContainerID1>`, `<ContainerID2>`, and `<ContainerID3>`
       ➢ Value: Alphanumeric (34); Barcode on Container/IMcb/99M
       ➢ Required when Container Type(s) (i.e., `<SortContainerType1>`) provided.
       ➢ Will populate SSFv2.0 D1 pos 14 (Container ID 1), D1 pos 16 (Container ID 2), and D1 pos 18 (Container ID 3) fields.
     • Sort Container Type(s) `<SortContainerType1>`, `<SortContainerType2>`, and `<SortContainerType3>`
       ➢ Values: “Pallet” or “Sack”
       ➢ Required when Container ID(s) (i.e., `<ContainerID1>`) provided.
       ➢ Will populate SSFv2.0 D1 pos 15 (Container Type 1), D1 pos 17 (Container Type 2), and D1 pos 19 (Container Type 3) fields.
     • Surcharge Type `<SurchargeType>`
       ➢ Value: 2-digit alphanumeric i.e., “E2” (Same Day/Next Day)
       ➢ Required when `<NextDay>="true."`
       ➢ Will populate SSFv2.0 D1 pos 57 (Surcharge Type) field.
     • Surcharge Amount `<SurchargeAmount>`
       ➢ Value: Decimal (i.e., $20 would be “20.00”)
       ➢ Required when `<NextDay>="true."`
➢ Will populate SSFv2.0 D1 pos 58 (Surcharge Amount) field.

- **Shipment Fee Code (<ShipmentFeeCode>)**
  - Value: Alphanumeric (3) (i.e., “PKF”)
  - Will populate SSFv2.0 H1 pos 10 (Shipment Fee Code) field.

- **Extra Fee for Shipment (<ExtraFeeForShipment>)**
  - Value: Decimal (i.e., $20 would be “20.00”)
  - Will populate SSFv2.0 H1 pos 11 (Extra Fee for Shipment) field.

- **Discount Type (<DiscountType>)**
  - Value: 2-digit alphanumeric i.e., “D6”
  - Will populate SSFv2.0 D1 pos 59 (Discount Type) field.

- **Discount Amount (<DiscountAmount>)**
  - Value: Decimal (i.e., $20 would be “20.00”)
  - Will populate SSFv2.0 D1 pos 60 (Discount Amount) field.

- **Same Day/Next Day Program Indicator (<NextDay>)**
  - Value: Boolean (true/false); Default will be “false.”
  - When “true”, <SurchargeType> of “E2” (Same Day/Next Day) and <SurchargeAmount> required otherwise an error will be returned.
  - When “true”, “SAME DAY DELIVERY” endorsement and carrier release “CARRIER – LEAVE IF NO RESPONSE” markings will be displayed on the label.
  - The <NextDay> indicator will take precedence over <CarrierRelease> tag when determining markings printed on the label.

- **Label image updates to support eVS PSDE and PSLW:**
  - New “SAME DAY DELIVERY” endorsement option
  - Service icon for PSDE and PSLW = solid box
  - Service banners for PSDE = USPS PARCEL SELECT®; PSLW = USPS PS LIGHTWEIGHT®
  - Reference Appendix B for samples

4. **SCAN API Updates (API=SCAN)** – Web Tools will update the SCAN API to support PSDE and PSLW:
   - Only PS Form 3152 will be supported. An error will be returned if PS Form 5630 is indicated in the SCAN XML request.
   - New PSDE/PSLW SCAN form validation:
     - All eVS IMpb <DestinationEntryFacilityType> values must match to populate SSFv2.0 H1 pos 6 (Entry Facility Type) field otherwise an error will return.
     - All eVS IMpb <POZipCode> values must match <EntryFacility> value provided in SCAN XML request to SSFv2.0 populate H1 pos 7 (Entry Facility ZIP Code) field otherwise an error will return.
     - All eVS IMpb <ShipmentFeeCode> values must match to populate SSFv2.0 H1 pos 10 (Shipment Fee Code) field otherwise an error will return.
     - All eVS IMpb <ExtraFeeForShipment> values must match to populate SSFv2.0 H1 pos 11 (Extra Fee For Shipment) field otherwise an error will return.
     - All eVS IMpb Containerization Indicators (determined from <SortationLevel> & <DestinationEntryFacilityType>) must match to populate SSFv2.0 H1 pos 12 (Containerization Indicator) field otherwise an error will return.
     - When <DestinationEntryFacilityType>=”DSCF” or “DNDC”, all eVS IMpbs added to a SCAN request must have at least one Container ID (i.e., <ContainerID1>) value and Container Type (i.e.,<SortContainerType1>) to populate SSFv2.0 D1 pos 14 (Container ID 1) and D1 pos 15 (Container Type 1) fields respectively otherwise an error will return.

5. **Shipping Services File updates** – Web Tools will make updates to generate the Shipping Services File for eVS Parcel Select Destination Entry (PSDE) and Parcel Select Lightweight (PSLW) labels – reference 2.6.1.3 above for details.
   - Contact [webtools@usps.gov](mailto:webtools@usps.gov) for questions or detailed specifications.
6. RateV4 Updates (API=RateV4) Web Tools will update the RateV4 API to support PSDE and PSLW:
   - New <Service> values “PARCEL SELECT DE” and “PARCEL SELECT LW.”
   - eVS Label API integrators will need to include the below additional request tags in RateV4 to return PSDE and PSLW pricing/availability:
     - <RateClientType>="011" (eVS)
     - <RatePriceType>="B" (CBP) or "P" (CPP)

     - <SortationLevel>

2.7 Production Release: July 29, 2021
   External testing: July 12, 2021

2.7.1 eVS Domestic Label API – Global Direct Entry (GDE) Updates
   1. Web Tools will update the eVS Domestic Label API to identify Global Direct Entry (GDE) customers and verify mail class and extra services provided in the request are supported by GDE when generating eVS labels.
      - API configuration updates will allow eVS integrators to be flagged as GDE customers.
      - New GDE-specific Service Type Codes (STCs) will be supported within the eVS Domestic API (API=eVS) for use in the barcode and Shipping Services File. Reference table below.
      - Web Tools will verify GDE customer requests must include a combination of mail class (service) and extra service supported by GDE when generating eVS Domestic labels otherwise a new error will return.
      - Web Tools will update the Shipping Services File for GDE customers to always include an extra service code value of “365” in the D1 pos #44 Extra Service Code 1st Service field to indicate GDE.
      - Contact webtools@usps.gov for questions.

2.7.2 Price Change (effective August 29th, 2021)
   1. Summary: USPS is enacting a Price Change on August 29, 2021. Web Tools will make updates to support new prices which will be released to production in the late-night hours of July 29th. New prices will be available on August 26th when using a ship date of August 29th or beyond. All domestic and international price calculator and shipping label APIs will reflect updated pricing in XML responses, on shipping label images, and in the Shipping Services Files (see Appendix A for full list of price calculator and label APIs). For information on specific prices being updated, please go to https://about.usps.com/newsroom/national-releases/2021/0528-usps-proceeds-with-request-for-postal-rate-change.htm.

2.8 Production Release: August 27, 2021
   External testing: August 9, 2021
Items will be moved to this release when scheduled and included in future versions of the release notes.

### 2.9 Production Release: September 30, 2021

**External testing:** September 13, 2021

Items will be moved to this release when scheduled and included in future versions of the release notes.

### 2.10 Production Release: October 28, 2021

**External testing:** October 11, 2021

### 2.10.1 Unsecure HTTP Endpoint Retirement

1. Effective October 2021, Web Tools will remove support for all unsecure HTTP endpoints.
   - After this change, all Web Tools API requests to an unsecure HTTP endpoint will fail. To continue using the Web Tools APIs, all requests must be made using secure HTTPS endpoints.
   - Integrators currently using an unsecure HTTP endpoint should transition as soon as possible to the appropriate secure HTTPS endpoint below to prevent any loss of service.
   - This change will impact only the API endpoints; the API request and response schemas will not change.
   - Contact webtools@usps.gov for questions.

<table>

</thead>
</table>

Table 5: Unsecure HTTP Endpoint Retirement Schedule

### 2.11 Production Release: November 18, 2021

**External testing:** November 8, 2021

Items will be moved to this release when scheduled and included in future versions of the release notes.

### 2.12 Production Release: To Be Determined

Items will be moved to release dates as scheduled and included in future versions of the release notes.

1. Customs Forms API Restrictions – Web Tools will prohibit external use of the Customs Form CN22 (API=CustomsCN22V2) and Customs Form CP72 (API=CustomsCP72V3) APIs.
2. Merchandise Return Service (MRS) Label APIs – Retirement (APIs= MerchandiseReturnV4, MerchReturnV4Bulk) - Web Tools will retire the Merchandise Return Service Label (API=MerchandiseReturnV4) and Merchandise Return Service Bulk Label (API=MerchReturnV4Bulk) APIs effective TBD.
   - Current Merchandise Return Service (MRS) API integrators should contact the USPS Mailing & Shipping Solutions Center (MSSC) at 1-877-672-0007 to transition from the MRS API to the new Web Tools USPS Returns Label API immediately. Business hours for the MSSC are Monday-Friday from 7:00 AM-7:00 PM Central.
3. International Price Calculator API, Label APIs, and GXG APIs will be updated to return correct service availability for country or territory indicated in XML request – reference Appendix A sections: 3.1.2 and 3.1.4 for full list of international price calculator and label APIs.
   - Current logic returns availability for a parent country even when a child territory is included in XML request. Web Tools will update to use the country or territory provided in the request to resolve inaccurate availability being returned when service availability differs between the parent country and child territory.
   - Example: Norfolk Island (Australia) – Australia is the parent country of child territory Norfolk Island. Norfolk Island does not have GXG service but Australia does. Web Tools updates will return the correct availability for the country or child territory provided and update any error...
messages to reference the country or child territory. Note: USPS service availability by country is subject to frequent updates and can be found at:
- Updates will not result in any XML request/response structural changes, but integrators should test to confirm they see correct availability returned when a child territory is indicated in the XML request.

4. International Price Calculator API - Outbound Commercial Provider Initiative (OCPI) Updates: Web Tools will update the International Price Calculator APIs (APIs=IntlRate, IntlRateV2) to support accurate pricing and availability for international destination countries where OCPI logistics providers are used.
- There will be no XML request/response structural changes, however integrators are encouraged to test and verify they receive correct pricing and availability.

5. eVS International Label APIs - Outbound Commercial Provider Initiative (OCPI) Updates: Web Tools will update the eVS International Label APIs to support the generation of a new PS 2976-C customs form when required by OCPI logistics providers to applicable destination countries.
  - Impacted APIs:
    * eVS Priority Mail Express International Label API (API=eVSPriorityMailExpressIntl)
      - “E” service icon with “OCPI” printed at the bottom.
    * eVS Priority Mail International Label API (API=eVSPriorityMailIntl)
      - “P” service icon with “OCPI” printed at the bottom.
  - PS 2976-C customs form will display “CUSTOMS DECLARATION” on top of form.
  - PS 2976-C customs form will display the correct form name and date in the footer.
  - Updates impact only the label image returned. Current barcode prefix/ranges, XML response, and Shipping Services File will remain unchanged.
  - PS 2976-C customs form will only return for applicable destination countries. Global Express Guaranteed (GXG) and APO/FPO/DPO+PTFAS destinations will not support the PS 2976-C customs form.
  - Contact webtools@usps.gov for any questions.

6. Priority Mail Express Commitment Updates
- Web Tools will update the Priority Mail Express receipt image remove legacy options and display a “6PM” commitment checkbox.
- Impacted APIs: TBD

7. USPS Returns Label API – updates to support additional features including:
  - Label images/sizes: ZPL (203 and 300 dpi), true 4x6 portrait, true 6x4 landscape, and true 4x4 (restricted)
  - Priority Mail Cubic Returns pricing
  - Support locations requiring a Customs Form
  - Label Broker integration

3.2 Appendix B – Sample API Requests, Responses, and Labels

3.2.1 Sample XML Requests

This section provides sample XML requests to the CAT/staging environment that demonstrate some of the changes implemented to our APIs in this release. These requests are provided as a reference to aid in your understanding of the changes and in your integration with our updated APIs. You should still complete your typical testing and verification processes to ensure that your system is communicating properly with the most updated versions of the Web Tools APIs.

Please note that you must place your valid UserID into the request. Sample responses are provided below the sample requests to illustrate the changes that will occur. Please note that the data within the tags may differ depending on inputs provided. Areas of note are highlighted.

**IntlRateV2 API Sample Request**

January 2021 Release reference 2.1.1: Roll indicated with new `<Container>="ROLL"` request tag with dimensions that meet FCPIS roll validation.

```xml
